

Bachelor of Technology in Electronics Engineering (MIT AOE), Pune Specialization: PCB Design and Embedded Systems	(2023 – Present)
● SGPA (Second year): 9.32 ● Modules: Object-Oriented Programming (OOP) and Data Structures in C++, Principles of Communication Systems, Essentials of Data Science, ARM-Based Embedded Systems, Electromagnetic Theory, Electronic Circuits and Applications, Circuit Theory	
10th Grade, SSc D.Y. Patil English medium School	Jan 2009- April 2021
● A Levels Equivalent: 84.20% in SSC.	
12th Grade, HSc D.Y Patil, Shahunagar	Jan 2021- April 2023
● First Class: 73.83%	

WORK EXPERIENCE

Data Automation Intern Zumax Innovation	Aug 2024- Jan 2025 Remote, Pune
● Created a Python program to automatically process material data (like thickness, length, weight, and type) from CSV files for a steel company. ● Made the work faster and easier by removing the need to enter data manually and adding date, time, and full details automatically. ● Used skills like Python programming, automation, working with data, and improving how tasks are done.	

COURSES & CERTIFICATIONS

Python Programming – CodSoft
[Codsoft](#)

Python Essentials - cisco
[cisco](#)

Introduction to cybersecurity
[cisco](#)

PCAP Programming – essentials to python
[cisco and pcap](#)

Projects

- **STM32-Based Simulated TV Remote with Display and IR Features:**
Designed an STM32-based embedded system that simulates a TV remote with channel/volume/mute/power control, using 7-segment display, I2C LCD, relay, buzzer, and integrated an IR receiver for remote signal decoding via STM32CubeIDE.
- **Periodic Noise Removal from Images Using Frequency Domain Filtering in MATLAB:**
Designed and implemented a technique in MATLAB to remove periodic noise from grayscale images using frequency domain filtering, involving Fourier transform, spike detection, and targeted frequency masking to enhance image quality without losing key details.
- **Design and Simulation of A micro-scaled graphene-based wideband (0.57–1.02 THz) patch antenna Using HFSS:**
Designed and simulated a micro-scale graphene E-shaped patch antenna with T-shaped graphene ground on Rogers RT/Duroid 6010 substrate (0.57–1.02 THz) using ANSYS HFSS; analyzed return loss (S11), VSWR, and radiation patterns for high-speed short-range communication and medical sensing applications, achieving results consistent with theoretical expectations.

TECHNICAL SKILLS

- Programming Languages- Python (Libraries: NumPy, Pandas, Matplotlib), C++, Java, Embedded C.
- PCB Design & Prototyping – Experienced in 4-layer PCB design and real-life PCB prototyping, with practical knowledge of circuit simulation and design tools including Multisim, Proteus, KiCad, Eagle
- Embedded Software & Microcontrollers – Skilled in using Arduino IDE, STM32CubeIDE, and Keil for embedded system development. Familiar with 8051, Arduino, and STM32F411RE/RB microcontrollers.

SOFT SKILLS

- Effective Communication – Completed a Communication Skills course, developing strong abilities in **public speaking**, **active listening**, and **interpersonal communication** for clear and confident expression.
- Team Collaboration & Presentation – Gained hands-on experience through **group discussions**, **team presentations**, and **collaborative activities**, enhancing teamwork, critical thinking, and the ability to convey ideas effectively.
